Education Institute

This a education institution represents the stakeholders of a college system, including students, faculty, courses, departments, classrooms, staff, alumni, library, fees, and attendance. The college system works together to provide high-quality education to students and prepare them for successful careers. Students enroll in courses offered by faculty members, and the courses are organized into departments. Classrooms are managed by staff, and the college has a library containing relevant materials. Fees are collected to cover expenses, and attendance is tracked. Alumni are former students who have graduated from the institution. The college system works together to provide high-quality education to students and prepare them for successful careers.

OBJECTIVES

This MySQL database is designed to support the educational institution's management system, which includes various stakeholders such as students, faculty members, courses, departments, classrooms, staff, alumni, library, fees, and attendance. The college system aims to provide high-quality education to students and prepare them for successful careers. Students enroll in courses offered by faculty members, and these courses are organized into departments. Classrooms are managed by staff members, and the college has a well-equipped library containing relevant materials. Fees are collected to cover expenses, and attendance is tracked to ensure student progress. Alumni are former students who have graduated from the institution and can serve as a valuable resource for current students. The institution's success is attributed to the collaboration between these stakeholders and their dedication to achieving the college's goals. This database will aid in managing the vast amount of data required for effective decision-making, improving the college system's overall performance.

PROBLEM STATEMENT:

Retrieve the total number of students enrolled in each course.

QUERY:

```
SELECT CourseName,  
COUNT(*) as  
TotalStudents FROM  
Student JOIN Course  
ON student.courseID =  
course.CourseID  
GROUP BY  
CourseName;
```

The institute wants to analyze the geographic distribution of its students and identify the cities from which the highest number of students come from. Write a query to retrieve the list of cities along with the count of students from each city.

TotalStudents

QUERY:

```
SELECT city, COUNT(*) as  
TotalStudents FROM  
Student_Address GROUP  
BY city;
```

Retrieve the list of staff members and the number of students they have mentored.

Mentors and their students

■ Rajesh Kumar ■ Shilpa Gupta ■ Amit Singh ■ Sarika Sharma ■ Sanjay Patel

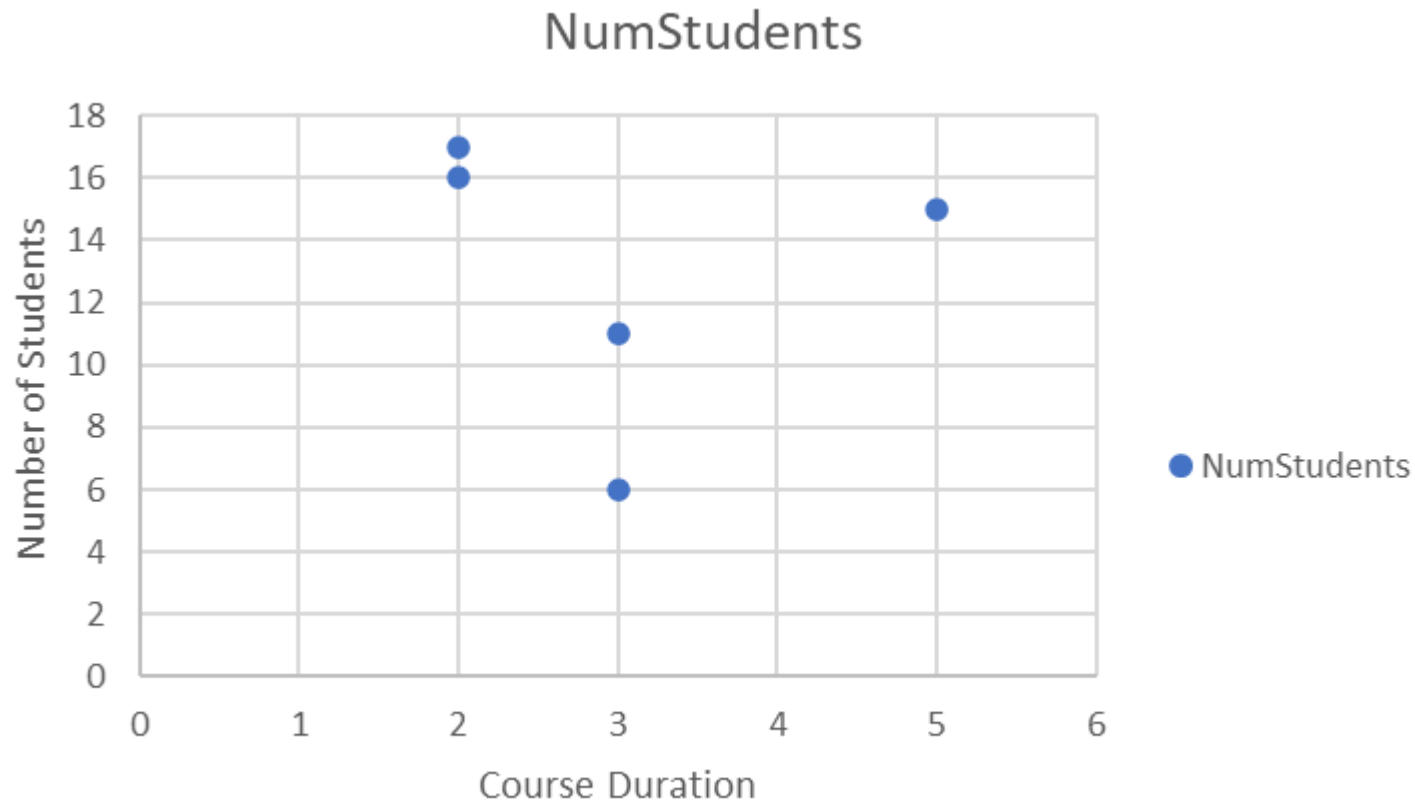

QUERY:

```
SELECT Staff.StaffName,  
COUNT(Student.student_id) as  
MentoredStudents FROM Staff LEFT  
JOIN Department ON  
Staff.DepartmentID =  
Department.DepartmentID LEFT  
JOIN Course ON  
Department.DepartmentID =  
Course.DepartmentID LEFT JOIN  
Student ON Course.CourseID =  
Student.courseID GROUP BY  
Staff.StaffName;
```

Retrieve the CourseName, CourseDuration and the number of students enrolled.

QUERY:

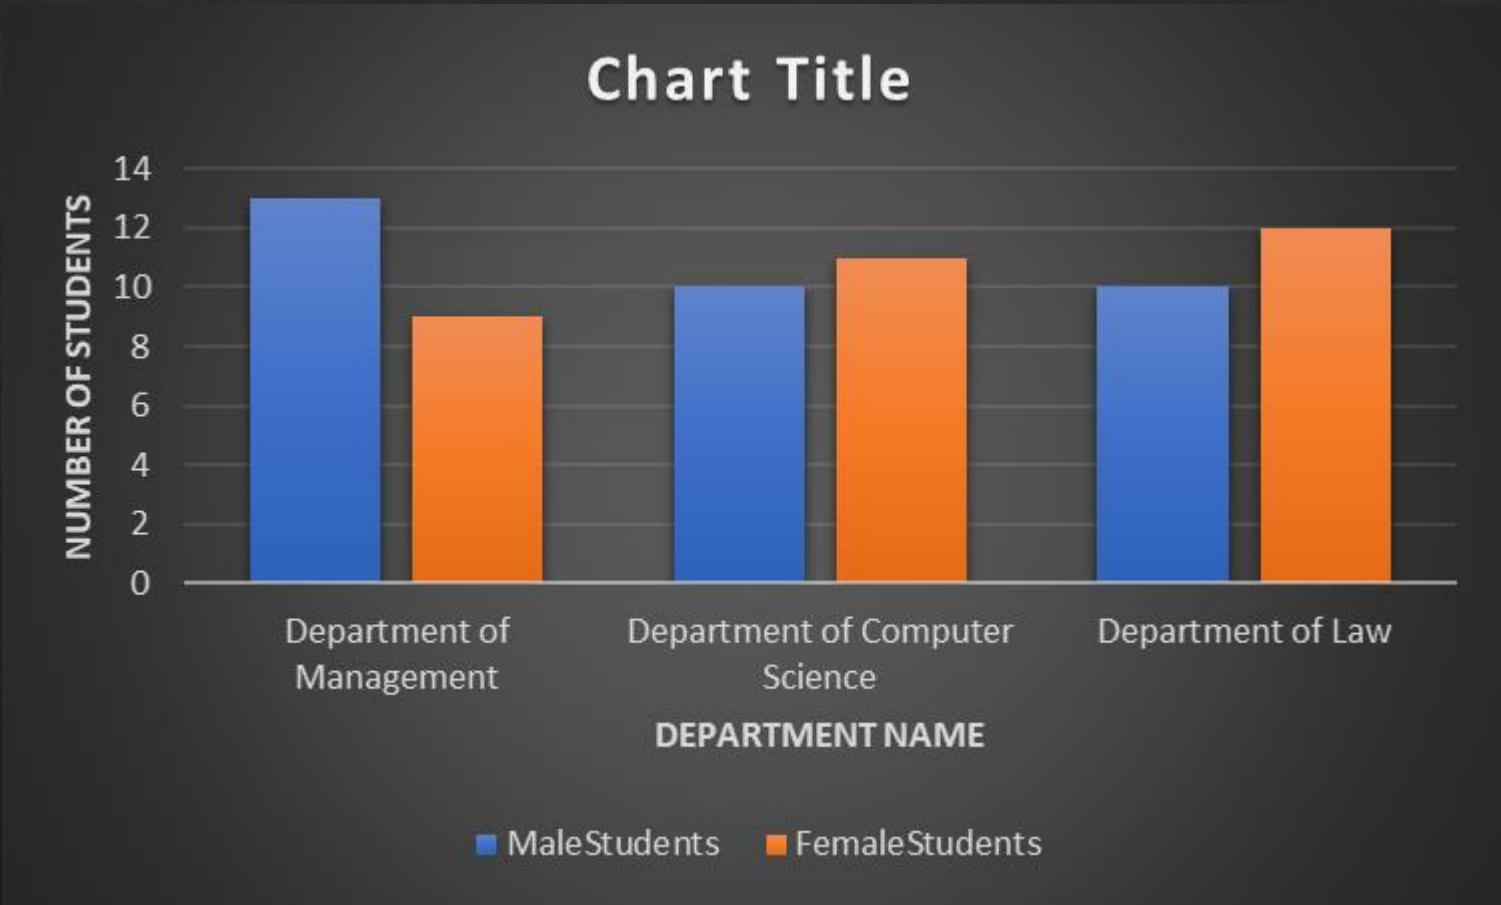

```
SELECT CourseName, CourseDuration, COUNT(*) AS NumStudents FROM Student JOIN Course ON Student.CourseID = Course.CourseID GROUP BY CourseName, CourseDuration;
```

Show the number of students from each department by gender.

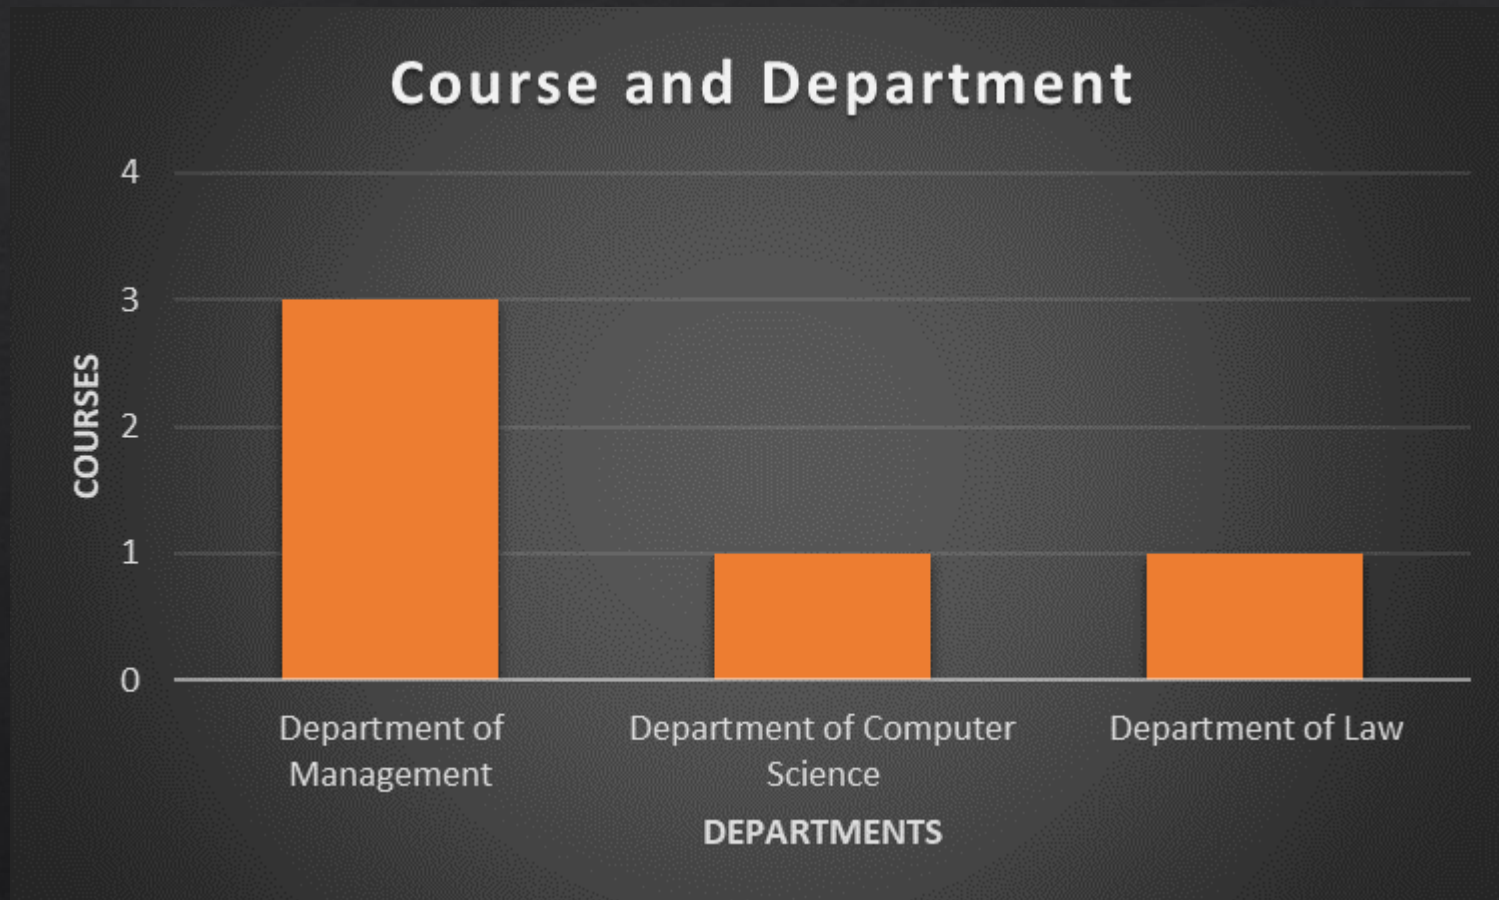

QUERY:

```
SELECT DepartmentName, (SELECT COUNT() FROM Student WHERE Department.DepartmentID = Student.departmentID AND student_gender = 'male') AS MaleStudents, (SELECT COUNT() FROM Student WHERE Department.DepartmentID = Student.departmentID AND student_gender = 'female') AS FemaleStudents FROM Department;
```

Show the number of courses offered by each department:

QUERY:
SELECT DepartmentName, COUNT(*) AS CourseCount FROM Course JOIN Department ON Course.DepartmentID = Department.DepartmentID GROUP BY DepartmentName;

Retrive the list of number of alumni by department

QUERY:

```
SELECT DepartmentName, COUNT(*) as NumAlumni FROM Alumni INNER JOIN Department ON Alumni.DepartmentID = Department.DepartmentID GROUP BY DepartmentName;
```

Number of Alumni

■ Department of Management

■ Department of Computer Science

■ Department of Law

Show the Total fees earned by each department.

QUERY:

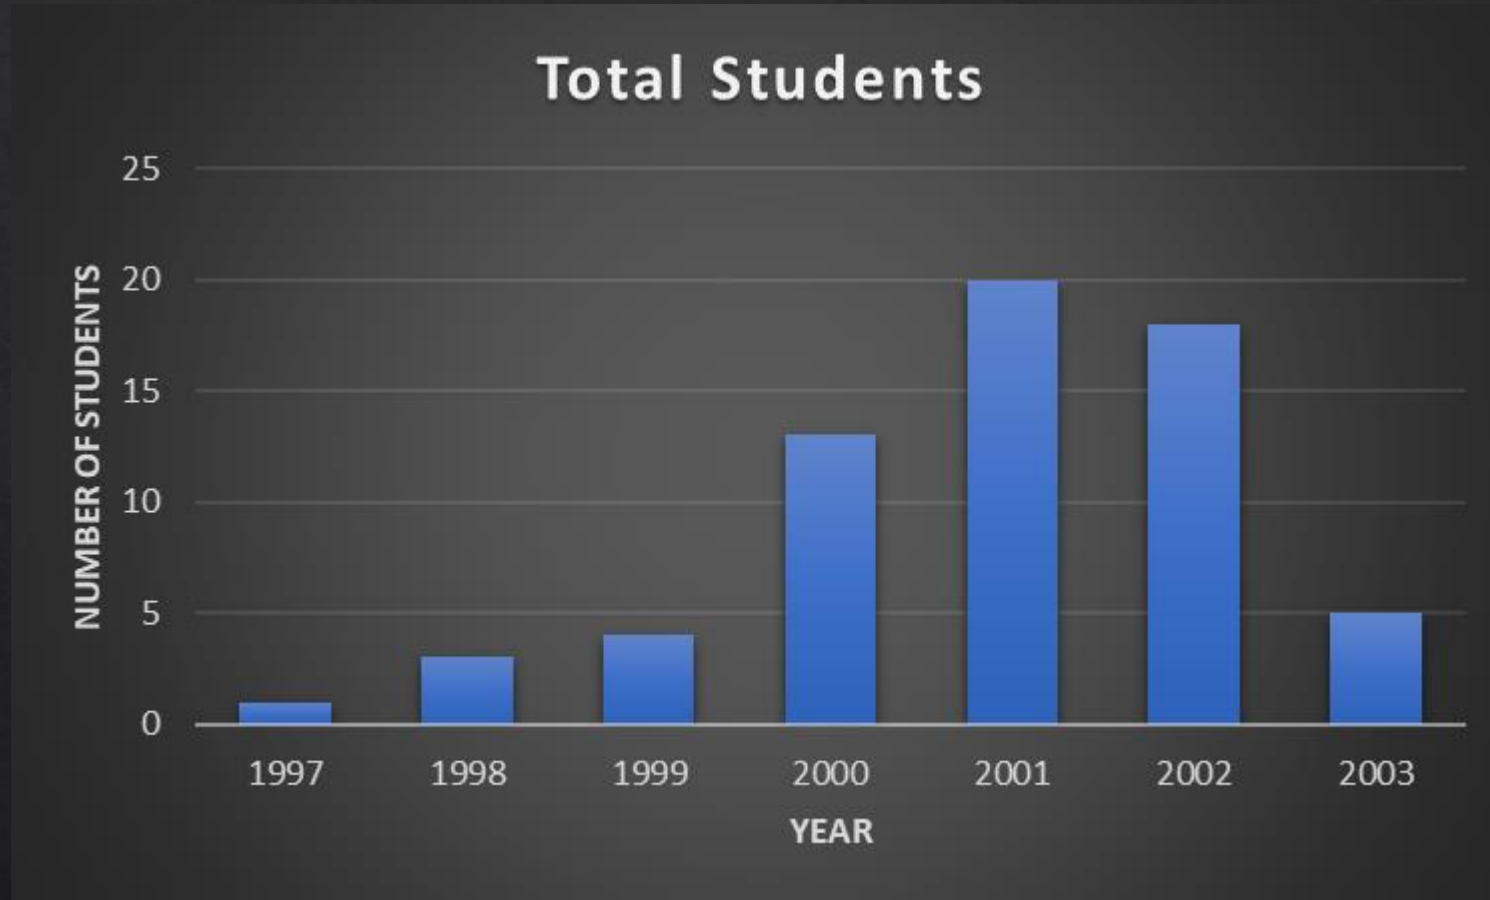

```
SELECT d.DepartmentName, SUM(f.Amount) AS TotalFees FROM Department d JOIN Student s ON s.DepartmentID = d.DepartmentID JOIN Fees f ON f.student_id = s.student_id GROUP BY d.DepartmentName;
```

Retrieve the count of students born in each year for generating a graph showing the distribution of students' birth year.

QUERY:

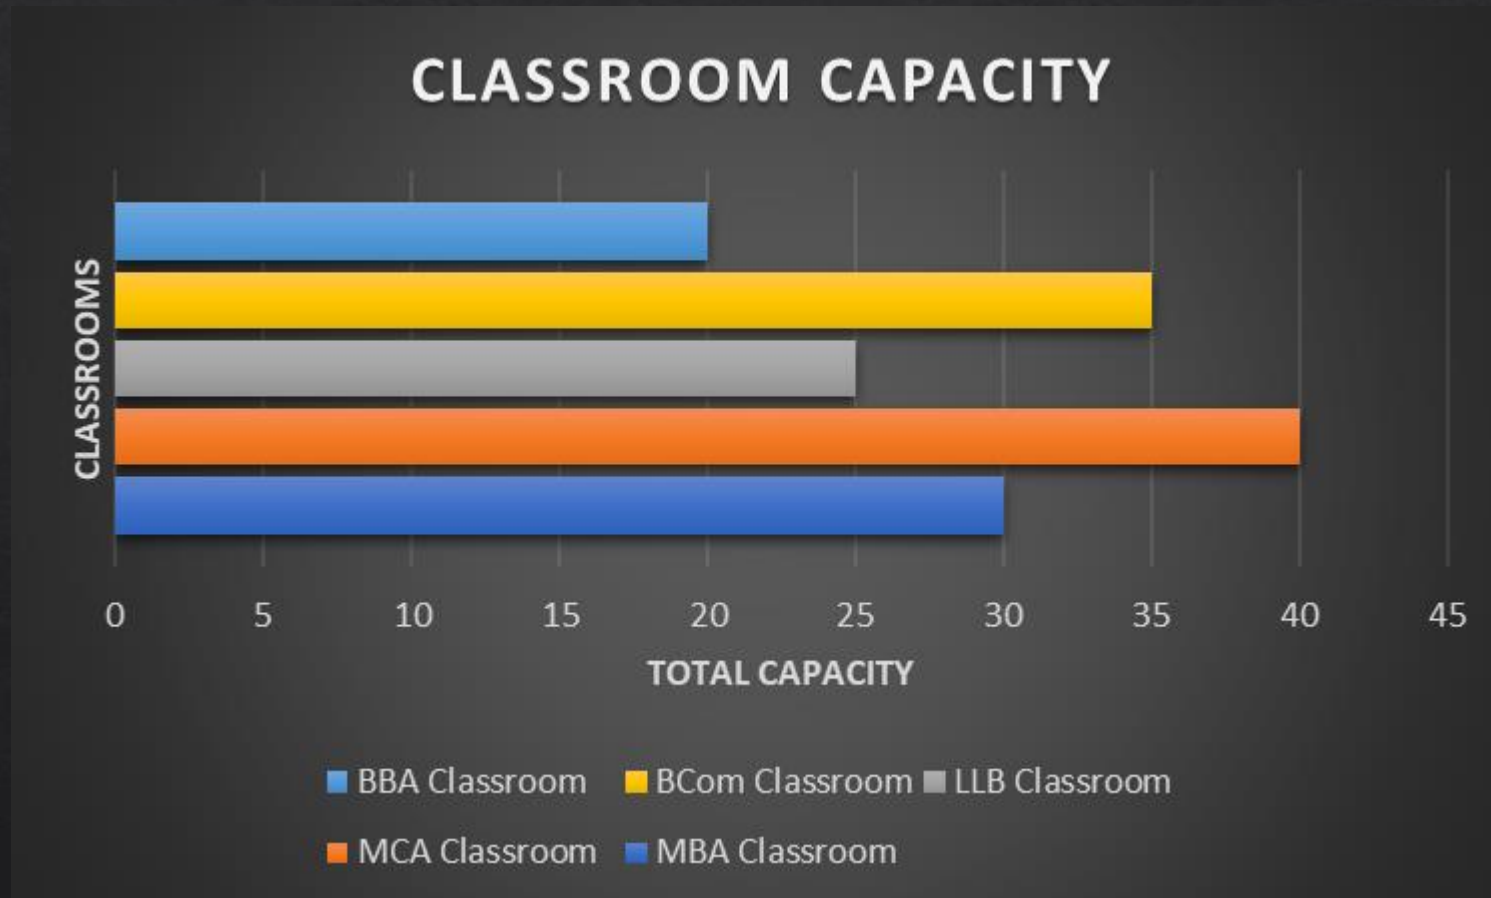

```
SELECT YEAR(student_date_of_birth) AS Year, COUNT(*) AS StudentCount FROM Student GROUP BY YEAR ORDER BY YEAR;
```

To retrieve the classroom names and their respective capacities

QUERY:

```
SELECT ClassroomName, ClassroomCapacity FROM Classroom
```

THANK YOU
